[REDACTED]

Team 18
 OF
 6'2 190
 Class of [REDACTED]

[REDACTED] is an interesting player. Has many of the tools you look for: bat speed, running speed. He could be a very good player at the next level.

Watching him hit, he has a very quiet lower half. He either doesn't stride at all, or takes a very small stride. What this does is keep him very balanced. It keeps his head still and that helps with pitch recognition. When your head isn't moving all around, it is much easier to recognize spin.

Really like his swing. Level planed, line drive stroke. Not too many moving parts. His exit velocity off the bat was 86, which is pretty much college level already. And I honestly don't think he swings hard enough. I think he would be at 90 if he swung harder. Swing with violence. Put you're A+ swing on every pitch. Tee work and work in the cage is where you work on your mechanics. You get in the box? Let it fly!! You're already 86.

With your frame and some more strength I think you could be in the mid 90's before you know it. I had an old teammate who used to say: "Swing hard in case you hit it." Langdon should live by that mantra.

Defensively he has a good, accurate arm from the outfield. Gets behind balls well, crow hops nicely, and has the perfect arm slot for an outfielder.

██████████ ran a 6.89 sixty. That's fast, especially for a 2024. If you lower that to the 6.6 range, you become an elite runner and it becomes a weapon for you in college. Get with a speed development coach.

You're already strong, but get stronger. Bust your butt in the weight room. Begin with the compound lifts: bench, squat, and deadlift. They are called compound lifts because they engage the most muscle groups and build overall strength. That will increase your bat speed, your arm strength, your running speed, and help to keep you injury free.

This young man is interesting. Good tools. I see him as a high D3 guy right now, but if he improves in the areas above, especially bat speed and running speed, he could find himself on a D1 roster.
